Election/Restrictions

1. Newly submitted claims 24-26,29,30,32,35,36 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

The claims drawn to an emissive, luminescent and field emission display are considered properly restricted under an intermediate-final product relationship. The claims filed 8-23-08 are evidence that the display/substrate does not require the particulars of the composition. It should also be noted that the term "glass substrate according to claim" lacks antecedent basis because the claims from which they depend are not drawn to a substrate but a composition.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 24-26,29,30,32,35,36 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 103

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1-12,15-21,27,28,31,33,34 are rejected under 35 U.S.C. 103(a) as obvious over Khiati et al WO 98/40320. US 6,905,991 is the US equivalent to the WO document and will be referenced.

Khiati et al teach a glass composition to be used for plasma screens and electroluminescent screens (column 1, lines 10-15) which includes:

SiO ₂	55-75 wt%
Al ₂ O ₃	0-7
ZrO ₂	0-8
Na ₂ O	2-8
K ₂ O	2-8
CaO	4-11
MgO	0-4.

The total alkaline earth metal must be equal to or greater than 12 wt% and less than 20% (column 8, lines 14-25). SrO may be added to increase chemical resistance and resistivity, both desired properties of display compositions (column 8, lines 25-31). It is noted that the examples in column 10 include between 7.5-9 wt% SrO and have strain points and viscosities within the instant claims. The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time of the invention to have selected the overlapping portion of the range disclosed by the prior art because overlapping ranges have been held to be a prima facie case of obvious, see *In re Malagari*, 182 U.S.P.Q 549. As well as Khiati et al provide a reason to further include SrO to improve the chemical resistance and resistivity of the glass, desired properties of display compositions.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1793

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
